**DETAILED ACTION**

***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

Invention I: Claims 1-11 are drawn to a method of accessing usage parameters associated with a financial transaction account, classified in class 705, subclass 35.

Invention II: Claims 12-32 are drawn to a method of accessing, controlling and managing the usage parameters for a group of financial accounts including a key account and at least one dependent account, classified in class 705, subclass 35.

Invention III: Claims 33-34 are drawn to a method of accessing and controlling usage parameters associated with a financial transaction account including the step of accessing both primary and dependent usage parameters by key account holder and validating the account holder identification, classified in class 705, subclass 35

The inventions are distinct, each from the other because of the following reasons:

Inventions (I) and (III) are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. These combinations are independent if it can be shown that (1) they are not disclosed as capable of use together, (2) they have different modes of operation, (3) they have

different functions, or (4) they have different effects. (MPEP 806.04, MPEP 808.01). In the instant case, the different inventions have different effects.

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.

This application contains claims directed to the following patentably distinct species of the claim invention:

**If Applicant elects Invention I**, Applicant must then elect one species from each of the following groups:

**Type of product usage parameters:**

- a. Ranges of time
- b. Geographical restrictions
- c. Restrictions on the types of goods and services

**If Applicant elects Invention II**, Applicant must then elect one species from each of the following groups:

**Alternative entry modes:**

- a. Global computer network (Internet)
- b. Telecommunications system
- c. Written correspondence
- d. E-mail

**Alternative path types:**

- a. Issuer
- b. Third party
- c. Processor

**Alternative impact types:**

- a. Communication usage parameters
- b. Credit line usage parameters
- c. New user usage parameters
- d. Block user usage parameters
- e. Payment allocation usage parameters
- f. Authorization usage parameters

Applicant is required under 35 U.S.C 121 to elect a single disclosed species for prosecution on the merits to which the claim shall be restricted if no generic claim is finally held to be allowable.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention. An argument that a claim is allowable or that all claims are generic is considered non responsive unless accompanied by an election.

Upon allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after election, applicant must indicate which are readable upon elected species. MPEP § 809.02 (a)

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

The examiner notes that per MPEP 812.01 no telephone communication was made due to complexity of the restriction requirements.
